A STOCK MARKET LEARNING & TRADING SIMULATION PLATFORM

K.G LEARN TRADE GROW

Karine Gassanova

BSc (Hons) in Software Systems Development

Department of Computing and Mathematics

SETU 2026

OVERVIEW

An interactive web platform designed to help users develop practical investment knowledge through eight structured lessons covering stock market fundamentals, chart analysis, risk management and trading strategies. Each lesson concludes with a quiz requiring 70% to progress. Users then apply their knowledge in a live trading simulator using €10,000 of virtual funds.

TECHNOLOGY STACK

React Front-end Framework	JS Core Language	Firebase Auth & Database
Development IDE	GitHub Version Control	Alpaca Live Stock Market Data API

METHODOLOGY

Developed using an Agile approach across four time-boxed sprints, each involving planning, development, testing and review.

Plan Goals › **Build** Develop › **Review** Test › **Repeat** Next

1	Authentication & Database	Jan–Feb
2	Lessons & Quiz Engine	Feb–Mar
3	Trading Simulator	Mar
4	Testing & Finalisation	Mar–Apr
